

## Café Scientifique: What exactly is climate change and why should we care?

Speaker's biography

**David Saddington Climate Change Communicator, Scientist and Enviropreneur** 

Influencing UK & international policy, fronting a pioneering climate media campaign that reached over 3 million people and giving a TEDx talk at London's O2 arena are just a few of David Saddington's achievements as a climate change activist since experiencing a stark introduction to the impacts of climate change as a thirteen year old.

As a climate change communicator David works to raise the profile of the issue through blogging for media outlets like the Huffington Post, writing book contributions and organising innovative large scale public awareness events in the centre of UK cities involving outdoor cinema, interactive science experiments and panel debates. He is constantly looking for new and innovative to engage the public and is currently exploring using Virtual Reality technology to tell the story of climate change.

After leading education reforms to get climate change on school curricula David has pursued his own academic work studying climate science and a broad range of climate impacts from the environmental to economic, security & health implications.

Now at 23 David continues to be a contemporary voice and advocate for climate change action, speaking to a range of audiences around the world - from United Nations Conferences to MTV. David speaks about the opportunities and challenges from tackling climate change from his experience consulting on the implementation of carbon and energy policies and on sustainability initiatives with multinational corporations. He always seeks out innovation and ways to re-energise the conversation around this global challenge.
